PRINTABLE VERSION*

The ECOBUILT project responds to an increasing national and Europe-wide demand for professionals with a focus on sustainability who can manage the complexities of the planning process in various fields and at different scales. The objectives of the project are the following: (1) To design an integrated joint Master's programme in Eco-friendly Built Environment. The programme will be designed in cooperation with associate partners and will be practice-oriented on the one hand and flexible in terms of individualized learning paths, while on the other hand being adaptive in terms of inclusiveness; (2) To develop common integrated regulations and rules concerning admission, selection, student performance, and degree awarding; (3) To ensure QA of the programme with regard to current European Standards of QA; (4) To develop a promotion strategy to recruit talented students from around the world.
